NordicScreen

NordicScreen specializes in software for various screen solutions, including info screens, meeting room booking screens, and digital check-in solutions.

Through an intuitive and user-friendly online platform, customers can create engaging and relevant solutions tailored to their specific needs.

With NordicScreen, you can control your screens from a centralized platform and have full control over the solution from your computer. This means you can update the content on your screens in real-time, so they are always up-to-date and relevant to your audience.

NordicScreen offers extensive support and customer service. With a dedicated support team and online help center, customers have access to a wide range of resources to help ensure the best possible solution, so you can feel confident using your NordicScreen solutions at all times.

Q-Play Digital Signage

Investing in info screens and info screen software can help boost your business. With Q-Play info screen software, you can easily and efficiently utilize the valuable space for communication that your info screens provide.

Q-Play is an online-based solution that allows you and your colleagues to create and manage the content on your info screens remotely. With your

computer in hand, you can create a wide range of content, such as text, images, video, news, data from various data sources, websites, and data from calendar and booking systems. You can combine the content as you like, just like designing a PowerPoint presentation.

With Q-Play, you can unleash your creativity and design your content from scratch, or you can use one of the many available templates.

An all-in-one system

With user management, you and your colleagues can share the task of creating content and maintaining your info screens. At the same time, you can customize the various users' access so that you can keep track of who can edit what. And with SSO login, you can easily keep track of both username and password.

An info screen is a dynamic communication platform, and the many scheduling options make it possible for you to automatically change the content on your screens. This includes automatic on/off when the screens are not in use.

With Q-Play, you can integrate a wide range of different types of data sources onto your info screen. It can be anything from your PowerBI dashboard to your Office 365 calendar. Set up correctly, Q-Play retrieves the data from your data sources and updates the content on your screens automatically.

Media types and integrations

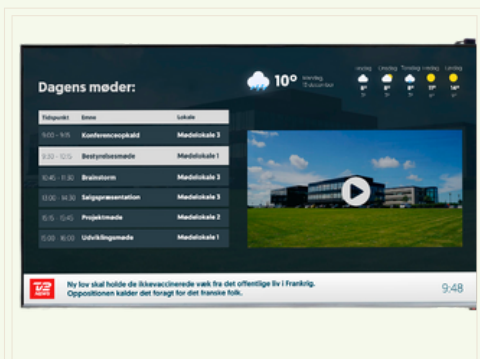

Q-Play is software in constant development, and work is continuously being done to expand content and integration options. Therefore, it is recommended that you take a look at [NordicScreen.com](https://nordicscreen.com) to see how you can create a solution that suits you.

Design examples of Digital Signage

Combine data from your calendar, weather, news, and video or images to create a useful and visually appealing info screen for your lobby. With integration into your calendar, the display of events in the house will update automatically.

Remind your employees of safety rules with smart graphics and video. Combine it with news or your company's RSS feed, and keep your employees on the floor updated on the latest news.

Use your preferred data sources to generate your dashboards. Then use the Web Automation app in Q-Play to insert your dashboards on your info screen. Combine your dashboards across data sources and with other useful information, such as news.

Increase your sales by exposing potential customers to great deals. Combine everything from text, video, images, and much more to make your products stand out.

Q-Cal Meeting Room Booker

If you choose to invest in a meeting room booking screen solution, you will get better utilization of your meeting facilities. At the same time, the solution can help you increase productivity in your company, improve collaboration, and provide you with a better and more efficient way to manage your meeting resources.

With Q-Cal's solution for your meeting booking screens, you get an extremely durable online-based solution with a wide range of options for both design and integration.

Calendar Integration

With Q-Cal, you get a wide range of standard integration options as standard. For example, Office 365, GSuite, and many others.

With a two-way calendar integration, you can be sure that the data on your meeting room screens are always automatically updated, and the same goes for the booking calendar for your meeting facilities.

See the many integration options at:
<https://nordicscreen.com/integrations/>

Start/stop Meeting and Ad-Hoc Booking

Features such as start/stop meetings and ad-hoc booking are some of the things that ensure that Q-Cal optimizes the use of your meeting facilities. The start/stop meeting function eliminates random "ghost meetings". If start is not pressed on the screen, the calendar integration will ensure that the booking of the meeting room is automatically canceled so that others can use the room. The same thing happens if you end your meeting early.

With ad-hoc booking, you can book available rooms directly on the screen outside the room. The calendar integration will automatically update the booking calendar for the room so that you are not disturbed because everyone can see that the room is occupied.

Automatic email to organizer

In addition to automatically removing the booking of the room, if a meeting is not confirmed on the screen at the location, Q-Cal can automatically send an email to the organizer of the meeting. This email helps users of your meeting facilities remember good meeting etiquette and cancel their bookings if they are no longer relevant.

ActiveMap

A picture is worth a thousand words. That's why it can also be an advantage to have an illustrative view of your meeting facilities. Upload a floor plan to Q-Cal, map out your meeting facilities, and now you can display an automatically updated floor plan of your meeting facilities on, for example, your info screen.

Using booking information from your calendar, Q-Cal will automatically color your meeting rooms either red or green depending on whether the room is available or not. This way, you can already see in the lobby which meeting room you need to go to. And if you're not a fan of the red and green colors, you can of course change them to the colors you prefer.

SignageViews

By collecting your calendar data in Q-Cal, you can generate different views of your data, which you can distribute on both info screens or on, for example, a website.

It can be views of today's menu, who has a birthday, or the events you have in the company in the coming period. The advantage of this is that you give yourself and your colleagues easy access to information that can be important for your everyday life. At the same time, Q-Cal ensures that all data is automatically updated based on changes in the calendar.

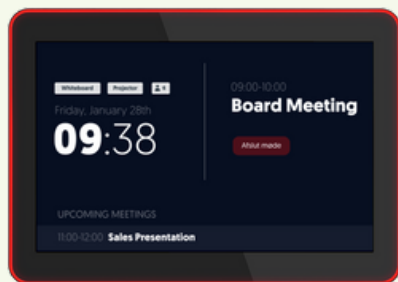

Design Examples of Meeting Room Booker

A conference room scheduling display can be used for much more than meeting rooms. It can also show the way to changing rooms, toilets, gym facilities, and much more.

The green and red LED edge clearly shows which rooms are available, even from a distance. At the same time, you can display both the subject and the organizer of both ongoing and upcoming meetings.

You can choose the design of your meeting room screens yourself. From your Q-Cal account, you can set up everything from the background image to the Start/Stop Meeting function and you can show which equipment is available in the room.

Q-Cal Visitor Management

With a digital check-in solution, you create a better experience for your guests. Your guests don't have to wait in line to be checked in, they will be greeted by the person they are visiting, and with the Guest Registration function, you always know who is in your buildings.

When guests arrive at your business, they will be greeted by a touchscreen. Based on your preferences, guests will be presented with a range of options, and based on their selection, they can check in with the right employee.

Q-Cal Visitor Management software includes a range of features that you can combine to create the right solution for your business. At the same time, you have the freedom to customize the design of your solution so that the screen's appearance matches your company's brand.

Appointment/No-Appointment

With this feature as part of your check-in solution, guests with an appointment can press the button for the employee they are visiting. The employee will then receive a direct message via email and/or SMS that their guest has arrived.

If your guests don't have an appointment, you can choose whether to show them a map of where they should go, a number to call, or simply advise a receptionist who can receive the guest.

Whether your guests have an appointment or not, with a solution like this, you can avoid disrupting your entire company when guests arrive. At the same time, your entire reception process becomes more efficient because guests check in directly with the right person.

Guest Registration

With the Guest Registration feature, you know exactly who is in the building, when they checked in, and when they checked out. You can also issue guest cards and ask the guest to sign legally binding documents such as a confidentiality agreement.

With a feature like this, you not only increase security in your buildings, but you also ensure that your employees can see if there are guests.

If you prefer not to use printed guest cards, you can also connect your Q-Cal Check-in solution to Vianomo and get reusable digital name tags for your guests.

Parking Registration

Not all companies can offer free parking. Therefore, you have the option of making parking registration a part of your check-in process. With integrations to both APCOA and Q-Park, you can ensure your guests avoid parking tickets while visiting your company.

Carrier

With the carrier feature, you get a button for package delivery on your check-in screen. This way, the delivery person doesn't have to wander around but knows precisely what to do to deliver the package. Thereby not disturbing all the employees in the company.

You can choose to show the delivery person a map of where he/she should go, or send a message to a group of contacts who can handle the package reception.

Azure AD Integration

With integration to Azure AD, you can import your clients from Azure AD into Q-Cal and ensure that the information in Q-Cal is always up to date. It is also an advantage for you when employees need to be removed or added to the system. When an employee is created or removed from Azure the information will integrate into Q-Cal. Here the integration will remove or add the employee as an option on your check-in solution per the changes in Azure.

Design Examples for Visitor Management

A Q-Cal Visitor Management solution is ideal for network houses and other locations where multiple companies share facilities. It can be confusing for both guests and delivery personnel to find the right company.

With a check-in like this, you can show the delivery person a map of the building, and other guests can be greeted by the person they are visiting.

Regardless of whether you have a solution for individual businesses or network houses, you can customize the background, colors, buttons, and design to match your preferred brand.

All customization and management of both design and setup take place online from your computer.
